                                                                                                                  Query Match
                                                                                                                                                                                                                    method for identifying a compound which disrupts polypeptide aggregation. The method is carried out using a cell which has been genetically modified to express aggregation-disposed polypeptides, or using purified aggregation-disposed polypeptides. The compounds identified by this method are useful for treating disorders associated with such polypeptide aggregation, including Huntington's disease, Alzheimer's disease, Parkinson's disease, spinocerebellar ataxia, multiple myeloma, amyloidosis, and spongiform encephalopathies like Creutzfeldt-Jakob disease and kuru in humans. The present sequence was annealed to its complement to generate double stranded duplex DNA with trinucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Screening for agents which disrupt aggregation of polypeptides for treating aggregation-associated disorders e.g. Alzheimer's disease, using aggregation-disposed polypeptides or cell expressing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polyglutamine region; polypeptide aggregation; aggregation disruption; huntington's disease; Alzheimer's disease; Parkinson's disease; procerebellar ataxia; multiple myeloma; amyloidosis; anticonvulsant; spinocerebellar ataxia; multiple myeloma; amyloidossis; anticonvulsant; spongiform encephalopathy; neuroprotective; nootropic; antiparkinsonian;

                                                                                                                                                          ৪
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to therapeutic agents comprising a first domain (D1) that binds a protein having at least seven consecutive glutamine (Glu) residues, a second domain (D2) that binds another proteir having at least 7 consecutive Glu residues, and a third domain (D3) that separates D1 from D2. The therapeutic agents of the invention are useful for inhibiting protein-protein interactions (e.g. aggregation, dimerisation or other physiologically significant association), and can be used for treating Alzheimer's disease, and disorders in which
                                                                                                                                                                                                                                                                                                            polyglutamine-containing transcription factors or coactivators are desirably active (e.g. disorders associated with homodimerisation of jun or hexamerisation of p33. The therapeutic agents can also be used to treat various disorders, including those associated with expanded trinucleotide (CAG) repeats. For example such disorders can include Huntington's disease (HD), primal and bulbar muscular atrophy (SBMA), dentatorubral-pallidoluysian atrophy, spinocerebellar ataxia type 1, type 6 or type 7, or Machado-Joseph disease (MD)/SCA3). The present squence represents an oligonucleotide used to generate double stranded DNA with trinucleotide extensions

In an example from the invention, neuronal PC12 cells were engineered to include an HD gene exon 1 containing this sequence. These cells were used to demonstrate the ability of single-stranded chemically-modified oligonucleotides (see ABSB1747-51) to decrease the formation of Huntington's protein (huntingtin) aggregates in cell culture. The invention provides chemically modified oligonucleotides that target sequence alterations to the triplet repeat region of the HD gene exon 1 and/or which reduce the formation of huntingtin protein-containing aggregates. These are useful for the treatment or prevention of HD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New single stranded oligonucleotides comprising a DNA domain he least one mismatch with respect to the genetic sequence of the Huntington's disease gene to be altered, useful for treating opereventing Huntington's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-AUG-2001; 2001US-0310757P.

                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of a fragment of exon 1 of the Huntington's CC disease (HD) gene comprising HD gene exon 1 and an enhanced green fluorescent fusion gene was used in examples from the invention investigating the ability of different oligonuclectides to reduce protein aggregation in CC PC12 cells containing integrated copies of the fusion gene. The invention is based on the discovery that oligonuclectides unrelated in sequence to that of a nucleic acid which encodes a protein aggregant can be effective in disrupting or preventing aggregation in disorders of protein assembly. CC A claimed method for identifying, from a plurality of oligonuclectides generated in sequence to introducing the oligonuclectides separately into cells that have or are clikely to develop protein aggregates and identifying those that are celfective at preventing, reducing or disrupting aggregation. The cc effective at preventing, reducing or disrupting aggregation. The cc effective at preventing, reducing or disrupting aggregation. The cc effective at preventing, reducing or disrupting aggregation. The cc spinocerebellar ataxia types 1, 2, 3, 6 and 7, dentatorubral composition at rophy, prion disease, psinobulbar muscular atrophy. Cc pallidoluysian atrophy, prion diseases, scrapie, bovine spongiform cc disease, disbettes type II, multiple myelome-plasma cell dysocrasia, cc medullary carcinoma of the thyroid, chronic renal failure, congestive amyelodosis.
                                                                                                                                                                                                                                                                                                                                                                                                           Matches

limonene-6-hydroxylase (LGH) and peppermint (-)-limonene-3- hydroxylase
(L3H). Host cells containing a vector comprising the nucleotide sequences
can be used for the recombinant production of limonene hydroxylases or of
primary enzyme products. The primary enzyme products are trans-carveol in
the case of (-)-L6H or trans-isopiperitenol in the case of (-)-L3H, which
are of subsequent use, to obtain enhanced expression of limonene
hydroxylase in plants to attain enhanced trans-carveol or trans-
isopiperitenol production as a predator or pathogen defense mechanism,
attractant or environmental signal. The limonene hydroxylase cDNAs also
provide a useful tool for isolating other monoterpene hydroxylase genes
and for examining the developmental regulation of monoterpene
biosynthesis. Sequences AAX06564-73 represent primers for the PCR
amplification of (-)-limonene-6-hydroxylase cDNA
                                                                                                                                                                                                Gibberellic acid; copalyl diphosphate synthase; 3beta-hydroxylase; 2-oxidase; phytoene synthase; C-20 oxidase; 2beta,3beta-hydroxylase; seed germination; seedling growth; gibberellin biosynthetic pathway;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated limonene hydroxylase nucleic acids - which encode limonene-6 -hydroxylase and limonene-3-hydroxylase, which can be used to produce trans-carveol and trans-isopiperitenol.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present primer was used to reverse transcribe cDNA encoding a C-20 CC oxidase. The amplific fragment is used in the method of the invention. The specification describes methods for the inhibition and control of CC gibberellic acid levels. Gibberellic acid levels may be inhibited or CC controlled by use of a chimeric expression construct expressing a RNA or CC protein which suppresses the gibberellin biosynthetic pathway sequence, CC diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-CC products. The methods uses copalyl diphosphate synthase, and a CC 2beta, 3beta-Mydroxylase, phytoene synthase, C-20 oxidase, and a CC 2beta, 3beta-Mydroxylase polynucleotides to achieve this. The method is used to control seed germination and seedling growth especially to CC regulate gene products of gibberellin biosynthetic pathway and CC produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes compared to normal plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Obtaining transgenic plant useful for controlling seed germination as seedling growth comprises transgene comprising a sequence expressing altered levels of an essential hormone.

The invention is used as a marker or detector of nervous system disorder or disease (e.g. Parkinson's disease, Alzheimer's disease, ischaemia, dementia). The invention may also be useful for treating deficiencies or disorders of the immune system (e.g. lymphopaenia, leukocyte adhesion deficiency syndrome or haemoglobinuria, anaemia), hyperpoliferative disorders (e.g. Gaucher's disease), infectious disease (e.g. harpes simplex), coagulation disorders, blood platelet disorders and autoimmune disorders (Addison's disease, rheumatoid arthritis, dermatitis, Grave's disease). The polymucleotide sequence is also used in gene therapy. The present sequence is also used in the identification and characterisation of polymucleotides up-regulated by fatty lesion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fatty lesion development, which comprises any of 55 polynucleotide sequences from Oryctolagus cuniculus. The polynucleotide, polypeptide antibody is useful for preventing, treating, modulating or ameliorating.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides regulated by fatty lesion development and their encoded polypeptides, useful for preventing, treating or ameliorating atherosclerosis, as well as for immune or hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                   digital sequence tag; expressed sequence tag; neuroleptic; antimanic; central nervous system; antidepressant; gene therapy; diagnosis; neuropsychiatric disorder; schizophrenia; bipolar disorder; addiction-related behaviour; chromosome identification; immune response;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC preventing, treating, modulating or ameliorating a medical condition such CC as a neuropsychiatric disorder. (I) are useful as diagnostic agents for Cd diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition such as neuropsychiatric disorder e.g. schizophrenia, a bipolar CC disorder or addiction-related behaviour. (I) are useful for detecting the presence of a nucleic acid encoding a protein in a mammalian tissue CC identification, to control gene expression through triple helix formation or antisense DNA or RNA, in gene therapy to treat the above mentioned CC disorders, identifying individuals from minute biological samples, as an alternative to restriction fragment length polymorphism (RFLP) and as CC molecular weight markers on Southern gels, diagnostic probes for the presence of specific mRNA in a particular cell type, as a probe to CC subtract-out known sequences in the process of discovering novel CC subtract-out known sequences in the process of discovering novel colymnolisation technique, and as an antigen to elicit an immune response. CC AAH21877 to AAH21894, AAB98083 and AAB98084 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

(I) have neuroleptic, antimanic and activities, and can be used in gene therapy. (I), polencoded by (I), or a host cell (III) comprising (I),
                 Novel isolated limonene hydroxylase encoding nucleic acid molecule, useful for altering production of limonene-6-hydroxylase or limonene-3-hydroxylase in suitable host cell.
                                                                                                                                                                                                                    14-APR-1999;

The sequences can be used in the diagnosis of T. solium infection, which current methods are incapable of distinguishing from other parasitic infections. Infection by the parasite causes neurocysticerocosis, which can then lead to neurological diseases, in Asia, Africa and the Latin Americas. The present sequence in the pre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of the peppermint and spearmint (-)-limonene-3-hydroxylase and the spearmint (-)-limonene-6-hydroxylase. Also provided are a number of probes and PCR primers which were used to isolate the sequences. These are useful in the production of transgenic plants with altered flavour and aroma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel purified recombinant Taenia solium metacestodes protein useful idetecting neurocysticerocosis disease, has specified molecular weight is encoded by truncated fragment of open reading frame DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10kDa antigen; immur neurocysticerocosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 T solium 10kDa antigen coding sequence PCR primer

CC microglia and macrophage regulatory gene DST (digital sequence tag)

CC sequences AA806401-AAS06590 represent these novel sequences and the

CC primer sequences used to isolate them. The PCR-based total gene

CC expression analysis (TOGA) system is used to examine the expression

CC unstimulated microglia, activated microglia, unstimulated macrophage and

CC unstimulated macrophage. The polynucleotides of the invention, the

CC polypeptides encoded by them and antibodies that bind to these

CC polypeptides are useful are useful for the dispossis, prevention,

CC treatment or amelioration of a medical condition, preferably a

CC neuroinflammatory pathology or a neurodegenerative disease such as

CC Alzheimer's disease, senile dementia, Parkinson's disease, obsessive

CC compulsive disorders, epilepsy, schizophrenia, multiple sclerosis,

CC depression and bipolar manic-depressive disorder. The sequences and

CC infectious disorders (e.g. severe combined immunodeficiency, SCID)

CC ancer), immune disorders (e.g. severe combined immunodeficiency, SCID)

CC inflammatory disorders (e.g. arthritis). The polynucleotides can be used

CC for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-NOV-1999;

                     This invention relates to the cDNA sequences of novel isolated CC polynucleotides associated with psychoses or other neuropsychiatric CC disorders. The sequences of the invention may act as blockers of D 2 CC receptors in the meso-limbic dopamine system. The nucleotide sequences of the invention and the polypeptides encoded by them are useful in the CC manufacture of a medical condition e.g. a neuropsychiatric disorder. An CC entibody that binds the proteins of the invention is useful for preventing, treating, modulating or ameliorating neurological disorders or a cc sequences are also useful for diagnosing neurological disorders or a susceptibility to a neurological disorder such as systhoses or other neuropsychiatric disorders or a cc sequence of mutation in the nucleotide sequence of apolipoprotein D or by determining the alteration (increase or decrease) in the presence or determining the alteration (increase or decrease) in the expression of cc apolipoprotein D. The sequences of the invention are useful in treating cdifferentiation or mobilisation (chemotaxis) of neuroblasts, stem cells or glial cells. The sequences of the invention are useful ementia, cc disease, Pick's disease, Dismeaser's disease, other senile dementia, parkinson's disease, obsessive compulsive disorders, epilepsy, consciption and cc onignoucleotide primer used in the identification of the cDNA sequences of the invention of the constant of the concephalopathy, ischaemia, addiction, multiple sclerosis, depression and cc of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Central nervous system; CNS; neuroleptic; mouse; human; psychoses; neuropsychiatric disorder; psychiatric disorder; Alzheimer's disease; pick's disease; sinswanger's disease; senile dementia; encephalopathy; parkinson's disease; obsessive compulsive disorder; epilepsy; ischaemiaddiction; multiple sclerosis; depression; manic-depressive disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotide useful in gene therapy for preventing, treating modulating or ameliorating a medical condition such as psychoses or a neuro psychiatric disorder e.g. schizophrenia, or a bipolar disorder :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-APR-2002.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                  The present invention describes an isolated polynucleotide (I) and its C complements, and degenerate variants, comprising a sequence selected from those given in ABQ73206 to ABQ73222 (NS), which is a digital sequence tag CC (DST) corresponding to mRNAs whose expression is regulated by corresponding to mRNAs whose expression is regulated by lercanide to make the present of the present of the present caused by mechanically induced intimal CC and reversed by lercanidipine treatment, (I) has antiatherosclerotic cc and reversed by lercanidipine treatment, (I) has antiatherosclerosic cc and reversed by lercanidipine treatment, (I) has antiatherosclerosing cc amedical condition (e.g. atherosclerosis) in a subject which involves determining the presence or absence of a mutation in (I) and diagnosing cf the medical condition based on the presence or absence of the mutation.

CC (I) is also useful for diagnosing atherosclerosis, or the susceptibility to atherosclerosis in a subject which involves detecting an alteration comparison of the present or diagnosing or monitoring the effects of treating a subject consisting the present calcium antagonist e.g., lercanidipine. (I) can also be used for preventing, treating, modulating, or ameliorating amedical condition such as atherosclerosis in a mammalian subject. The present continuents of the present continuents and the present continuents of the present continuents of the present continuents of the present continuents of the present condition the present condition of the present condition the present condition of the present condition the present condition t

                                                                                                                                                The present invention relates to a method for preventing, treating, combilating or ameliorating a medical condition. The method involves cadministering one or more nucleic acid molecules up- or down-regulated in the partitis B virus (HBV) infection or polypeptides encoded by the nucleic acid molecules or antibodies that bind to the polypeptide. The method is condition. It is also useful for greventing, treating, modulating or ameliorating a medical condition. It is also useful for determining the presence or absence of a condition in the nucleic acid molecules or detecting an alteration in conversion of the polypeptide which is useful for the diagnosis of the partitis viral infection (e.g., acute hepatitis versus chronic confiction or assessing the efficacy or toxicity of therapeutic treatment confiction for hepatitis viral infection and a gene expression profile is useful for identifying polypeptides and polynucleotides which are associated with the patitis viral infection. Sequences of the invention are useful as a confict of the patitis viral infection. Sequences of the invention are useful as a confict of the patitis viral infection and for treating infectious consists of the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is used for the present DNA sequence is a PCR primer which is the present DNA sequence is a PCR 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                         Query Match

Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is a PCR primer used to isolate pumpkin 2beta albeta hydroxylase cDNA. This primer is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to control of gibberellin (GA) levels in plants. The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Control of gibberellin levels in plants useful to avoid unfavorable conditions in crops to increase yields, using transgenic plants having reduced seed germination and early seedling growth then treatment to restore these properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gibberellin; transgenic plant; seed germination; seedling growth; GA; transgenic; 2beta-3beta hydroxylase; enzyme; pumpkin; PCR; primer; ss

Also included are test kits for enabling BRCA1 or hMLH1 gene testing comprising short PCR primers given in the specification, mixed in 20 mM of Tris-HCl, 50 mM KCl, 25 micro M of dNTP, and 5 formamide. The method is useful for detecting mutations in the BRCA1 (breast and ovarian cancer susceptibility gene, a tumour suppressor gene) and hMLH1 gene (a DNA mirror to the product of the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific to the present sequence is a PCR primer specific and primer s

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides. The chimeric polypeptides comprise a polypeptide segment that exhibits histone acetyltransferase activity, and a polypeptide segment having 40% or greater sequence identity to a subunit of a histone deacetylase chromatin-associated protein complex. The chimeric polypeptides are useful for determining gene expression profiles in specific cells, for modulating gene expression in specific cells, and for making genetically modified eukaryotes. The present sequence represents a

(I) have constatic activities, and can be used in vaccines and in gene therapy. The method is useful for preventing or treating e.g., ataxia telangiectasia (AT), AT tumours or other cancers. ACC79393 to ACC79423 represent primers used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Atherosclerosis; vaccine; nervous system disorder; Alzheimer's disease; Parkinson's disease; multiple sclerosis; immune disorder; gene therapy; autoimmune disorder; rheumatoid arthritis; hyperproliferative disorder; haemolytic anaemia; graft-versus-host disease; inflammation; infection; epilepsy; Addison's disease; neoplasm; tissue regeneration; chemotaxis; food additive; food preservative; primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 multiple sclerosis, epilepsy), immune disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., autoimmune disorders (e.g., haemolytic anaemia, graft-versus-host disease, inflammation), hyperproliferative disorders (e.g., neoplasms) and infectious diseases (e.g., viral, bacterial, fungal or parasite infectious diseases (e.g., viral, bacterial, fungal or parasite infection). They are used for regeneration of tissues, to repair, replace or protect damage tissues, for increasing chemotaxis activity of cells, for increasing or decreasing the differentiation or proliferation of embryonic stem cells from a lineage, for modulating mammalian characteristics, (such as body weight or height), for modulating mammalian metabolism affecting catabolism, anabolism, processing utilisation and storage of energy, to change a mammal's mental or physical state, or as a food additive or preservative. The invention is useful in gene therapy. The present sequence is a
                                                                                                            The present invention relates to a novel simplified TOGA (RTM) method for simultaneous sequence-specific identification of multiple mRNA molecules in a RNA population. The method involves characterising each of the sequence-specific polymerase chain reaction (PCR) products by partial sequence and length. The method is useful for determining tissue-specific
patterns of gene expression or mechanisms of drug interaction. It is also useful for drug screening, studying physiological processes, genomic mapping or manufacture of diagnostic, prognostic or therapeutic reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Simplified TOGA method for simultaneous sequence-specific identification of multiple mRNA molecules in mRNA population, useful for determining tissue-specific patterns of gene expression or mechanisms of drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene expression; drug genomic mapping; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ន្តន្តន្ត
                                                                                          This invention describes a novel tumor-associated oligopeptide that is CC recognized as an antigen by CDB+ cytotoxic T lymphocytes (CTL) and causes CTL-induced lysis and/or apoptosis of tumor cells, especially multiple CC myeloma cells. The oligopeptide is derived from human PRDI-BF1 (positive regulatory domain I-binding factor-1) which is able to induce an MHC (major histocompatibility complex) Class I allele variant A2-restricted immune response of CDB+ CTL against tumor cells. The products of the CC invention have cytostatic activity and can be used in a vaccine. The complex of the invention, salso related retro-inverse and pseudopeptides, CC fusion proteins (FP), polynucleotides, vectors, host cells and antibodies and T cell receptors specific for PRDI-BF1 peptides are useful for treating diseases associated with PRDI-BF1, particularly tumors. The products of the invention are also useful as diagnostic, therapeutic and comphylactic agents for detecting, modifying, generating, expanding and/or regulating activation and functional status of T cells, and for preparation of poly- or mono-clonal or recombinant A2-restricted T cell receptors and their functional equivalents. This sequence represents an antipolic approach of the products of the product of the products of the product of the products of the product of the products of the invention and functional status of T cells, and for preparation of poly- or mono-clonal or recombinant A2-restricted T cell receptors and their functional equivalents. This sequence represents an antipolic approach of the products of the produ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tumor; antigen; CD8+ cytotoxic T lymphocyte; CTL; CTL-induced lysis; multiple myeloma cell; human; PRDI-BP1; positive regulatory domain I-binding factor-1; MHC; major histocompatibility complex Class I; cytostatic; vaccine; ss;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New tumor-associated oligopeptide, useful particularly multiple myeloma, is recognized by CD8 cytotoxic T cell derivatives and related nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-SEP-2002; 2002WO-EP010701.

                                                                                                                                                                                                                                                               This invention relates to a novel method for preparing a library of samelength signature sequences from a source nucleic acid population. Specifically, it comprises producing solid phase cloned libraries of oligonucleotide tag-DNA signature sequence constructs, which are useful for sequencing many polynucleotides simultaneously. The present invention describes a kit for the construction of adapter signature-adapter constructs using 'first' and 'second' adapters each containing a specific restriction endonuclease recognition site, and which flanks the same length signature sequence. As such, using the method described herein it is possible to do parallel sequencing of large populations of diagnostics. This oligonucleotide sequence is a DNA oligo involved in the sequences from restriction fragments in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preparing a library of same-length signature sequences from a source nucleic acid population by ligating to the cleaved ends, a second adapter containing a recognition and cleavage site for a second restriction endonuclease.

The DNA sequences of the invention are useful for assessing, modifying, modulating or regulating intestinal epithelium or M cell development. The DNA sequences of the invention are also useful in the treatment of: inflammatory bowel disease, glutenenteropathy, infectious diseases, autoimmune diseases (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            intestinal epithelium cell development; peyer's patch M cell development; inflammatory bowel disease; glutenenteropathy; infectious disease; autoimmune disease; haemolytic anaemia; rheumatoid arthritis; dermatitis; Grave's disease; multiple sclerosis; allergy; asthma; diabetic mellitus; immune system disorder; hypersensitivity; anaphylaxis; blood group incompatibility; ss; PCR; primer.
                                                                                                                                                                                                                                                                                                                                                      disease, multiple sclerosis, allergy, asthma and diabetic mellitus), diseases or disorders of the immune system, hypersensitivity, anaphylaxis, and blood group incompatibility. The present DNA sequentepresents a primer that was used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated or purified polypeptide encoded by genes associated with intestinal epithelium or M cell development, differentiation or function useful for treating autoimmune diseases and infectious diseases.

                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. The recognition system is useful for screening, identifying, or characterizing at least 1 component of a sample, especially nucleic acids and/or proteins, and for screening for and/or identifying cellular or synthetic binding partners, preferably proteins, peptides, nucleic acids, chemical agents, preferably organic compounds, pharmaceuticals, plant protection agents, toxins, venoms, carcinogens, teratogens, herbicides, fungicides or pesticides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recognition system, e.g. for identifying nucleic acids, comprises least one recognition unit comprising a region with a defined struadjacent to a region with a randomized structure.
                                                                                                                                                            Novel antisense compound that hybridizes and inhibits nucleic acidenceding RAIDD which is an adaptor molecule containing both death and caspase recruitment domains, for treating hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antisense gene therapy; RAIDD; death domain; caspase recruitment CARD; hyperproliferative disorder; cancer; growth disorder; mouse metabolic disorder; infection; inflammation; tumour formation; RIP associated ICH-1/CED-3-homologous protein with death domain;

The invention targeted to a

describes

acid

compound (I) 8-50 nucleobases d molecule (II) encoding RAIDD

in length which is a

initiation codon, coding region, 5' and 3' intron-exon junctions,

polypeptide

first active agent comprising an

```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            გ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC adaptor molecule containing both death domain (DD) and caspase Crecruitment domains (CARD), where (I) specifically hybridises with and CC inhibits expression of RAIDD, or specifically hybridises with at least an CC enucleobase portion of an active site on (II). (I) is useful for CC inhibiting the expression of RAIDD (Receptor interacting protein (RIP) CC associated ICH-1/CED-3-homologous protein with death domain) in cells or CC tissues, and for treating an animal having a disease or condition CC associated with RAIDD, where the disease or condition is a CC engagerity of the condition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or greventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels CC of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, CC lung inflammation, lung allergies, or a respiratory disease or condition. CC Note: The sequence data for this patent is not represented in the printed consecution, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences

```

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and

Typing genes that contain polymorphic microsatellite loci, useful for identifying predisposition to disease, by amplification and determining

determining

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasconomstriction. CC distress syndrome, pain, cystic fibrosis, altergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the oligonucleotides into products that free adenosine into the system of the content of the anti-sense oligos corresponding to the oligonary brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 434
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a method of typing (MI) a gene (I) that has one commore polymorphic microsatellite loci (PML). The method comprises: PCR complation of at least one DNA region of (I) that includes PML, using cas template a DNA sample containing at least one segment of (I); and cas template a DNA sample containing at least one segment of (I); and containing the length of the resulting amplicon(s). Also described are: can method of determining (M2) microsatellite markers (MM) for crosatellite markers (MM) for containing (M2) microsatellite markers (MM) for containing (M2) microsatellite markers (MM) for containing (M2) microsatellite markers (MM) for containing (M2) of diseases associated with gene that conclude PML; and prediagnosis (M3) of diseases associated with gene that conclude PML. The method is used to identify microsatellite markers, in a conclude PML. The method is used to identify microsatellite markers, in a conclude PML. The method is suspecially prion diseases conclude PML also cystic fibrosis, malignant hyperthermia syndrome in pigs and contained concludes that encode milk proteins, contained to diseases; also to type genes that encode milk proteins, contained to diseases; also to type genes that encode milk proteins. This sequence represents a primer used to genotype a region of the sheep prion contained contained the sheep prion contain (PFP) comprising a polymorphic microsatellite locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC amplification of at least one DNA region of (I) that includes PML, using CC as template a DNA sample containing at least one segment of (I); and CC determining the length of the resulting amplicon(s). Also described are: CC method of determining (MZ) microsatellite markers (MM) for CC more PML; and prediagnosis (MJ) of diseases associated with gene that includes one or CC more PML; and prediagnosis (MJ) of diseases associated with gene that include PML. The method is used to identify microsatellite markers, in a CC disease related gene, that are associated with a prediagnosition to CC diseases and for prediagnosis of such diseases, especially prion diseases but also cystic fibrosis, malignant hyperthermia syndrome in pigs and CC metabolic diseases; also to type genes that encode milk proteins, CC hormones or transcription factors. The method is simpler, quicker and CC particularly less expensive than known methods based on sequencing. This sequence represents a primer used to genotype a region of the cow prion CC protein (PrP) comprising a polymorphic microsatellite locus.

                                                                                             ঠ
                                                                                                                                                                                                               The present sequence is that of pyrene-anchored locked nucleic acid (LNA) CC oligo(dT) primer ON12, which was used in first-strand cDNA synthesis from CC eukaryotic mRNA. It includes compound '17d' at its 3' end, which is based CC on an LNA-type 2'-0,4'-C-methylene-beta-D-ribofuranosyl moiety. It is CC one of a set of such primers (see also ACC48483-85) that were used in an CC example from the invention to demonstrate improved reverse transcription CC were observed: efficient priming on mRNAs with short poly(A) tails; CC efficient anchoring of the oligo(T) primers The following results CC units resulting in an improved T20-VN anchor primer and thus avoiding CC reverse transcription of long poly(A) tracts; and improved reverse CC transcription of eukaryotic poly(A) tracts; and improved reverse CC transcription of eukaryotic poly(A) tracts; and improved reverse CC that comprise unique base groups. Desirable nucleosase and nucleosidic CC base substitutions can mediate universal hybridisation when incorporated concluded acid strands. The novel LNA compounds can be used e.g. as CC PCR primers, in sequencing, the synthesis of antisense oligonucleotides, CC and in diagnostics

                                                                                                                                                       The present invention describes a multiplex real-time quantitative PCR method for determining the relative copy number of a group of target nucleic acid molecules present in a sample. The method comprises: (1) performing a first PCR in a PCR mixture; (2) performing a second PCR in a PCR mixture; and (3) quantifying the number of copies of the second PCR in a PCR mixture; and (3) quantifying the number of copies of the second PCR in a PCR mixture; and product present in the sample containing the target nucleic acid product present in the sample; and (2) determining whether a subject is at risk of acquiring Alzheimer's disease. The method is useful for determining the relative copy number of a group of target nucleic acid molecules present in a sample for determining whether a subject is at risk of acquiring Alzheimer's disease. ACC99620 to ACC99730 represent PCR primer used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                         Determining the relative copy number of a group of target nucleic acid molecules present in a sample by performing a first or second PCR in a PCR mixture and quantifying the number of copies of the second target nucleic acid product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Multiplex real-time quantitative PCR; PCR primer; copy number; Alzheimer's disease; ss.

                                                                                                                                                                                                            CC polymorphic sites and seabass polymorphic sites, or their complement; (2) conformations of their complement; (2) conformations of their complement; (2) conformations of their conformations of the sample comprising by the sample comprising a parentage genotype database comprising a collection of candidate parent genotype to the parentage genotype database, contacting the origin of the sample comprising a collection of candidate parent genotype to the parentage genotype database, where a match between the sample genotype and one of the candidate parent genotype identifies to the sample such as family salmonidae, S. salar, Tilapia, O. niloticus, crainbow trout, halibut, seabass and Atlantic cod. (II) is useful for detecting nucleic acid molecule comprising SNP in a sample, which convolves contacting the sample containing nucleic acid molecule comprising such as family salmonidae, S. salar, Tilapia, O. niloticus, crainbow trout, halibut, seabass and Atlantic cod. (II) is useful for convolves contacting the sample containing nucleic acid swith one or more convolves contacting the sample containing nucleic acid swith one or more convolves on a sample, comprising contacting the sample containing nucleic acid molecule comprising a polymorphic sites or seabass polymorphic sites, and identifying a polymorphic convolves with one or more (II) which is derived from O. niloticus of sites or seabass polymorphic sites, and identifying a mucleic acid that hybridises to (II). (III) is useful for detecting nucleic acid molecule comprising a polymorphic sites or seabass polymorphic sites, and identifying a nucleic acid that hybridises to (II) containing nucleic comprising a microsatellite sequence in sample. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an isolated nucleic acid (I) comprising a single nucleotide polymorphism (SNP) chosen from: (i) a nucleic acid of Salmo salar SNPs, Oreochromis niloticus SNPs or Atlantic halibut SNPs; and (ii) a nucleic acid having nucleotide sequence that hybridises to (i), or its complement under highly stringent hybridisation conditions. Also described: (I) an isolated oligonucleotide (II) comprising at least 17 contiguous nucleotides of a nucleotide sequence of S. salar SNPs, O. niloticus microsatellites, Atlantic halibut SNPs, cod nolvenorphic sites and seabass polymorphic sites, or their complement; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid molecule comprising single nucleotide polymorphism associated with fish, useful for forming PCR primers which are used for detecting single nucleotide polymorphisms in fish nucleic

                                                                                                                                                                                                                                                                                                                  The invention describes a method of typing (M1) a gene (I) that has one cor more polymorphic microsatellite loci (PMI). The method comprises: PCR amplification of at least one DNA region of (I) that includes PML using as template a DNA sample containing at least one segment of (I); and determining the length of the resulting amplicon(s). Also described are: a method of determining (M2) microsatellite markers (MM) for core PML; and prediagnosis (M3) of diseases associated with a gene that includes one or include PML. The method is used to identify microsatellite markers; in a disease related gene, that are associated with a prediagnosition to diseases and for prediagnosis of such diseases, especially prion diseases but also cystic fibrosis, malignant hyperthermia syndrome in pigs and metabolic diseases; also to type genes that encode milk proteins, and comparison or transcription factors. The method is simpler, quicker and comparison or transcription factors than known methods based on sequencing. This sequence represents a primer used to genotype a region of the cow prion comprising a polymorphic microsatellite locus.
                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of polypeptide-laminin B210.67, and the polynuclectide encoding it. Also described is the process for preparing the protein by DNA recombination. The polypeptide is useful for treating diseases such as embryo development teratogenesis. The present sequence for reverse transcriptase (RT)-PCR primer #1 is used with RT-PCR primer #2 (ABK12410) for isolating cDNA encoding polypeptide-

The sequences upstream and downstream of the microsatellite sequence were used to generate the required PCR primers for in vitro amplification of the corresp. microsatellite (using the program OPTIPRIM). The microsatellites may be used to identify individuals, for parentage testing, and in the genetic mapping of economic trait loci, or genes involved the determinism of economically important trait esp. in cattle, to allow selective breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is that of a bovine microsatellite sequence obtd. by screening a library of bovine Mbol DNA fragments of between 250 and 500 bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50 clones cross-hybridised. Assuming independent distribution of microsatellites and Mbol sites, the frequency of (T6)n >9 microsatellites
                                                                                 Solid phase immunoassay using oligo:nucleotide as label - also new conjugates of oligo:nucleotide coupled to antigenic peptide, partic. diagnosing hepatitis C or E virus infection.
                                                                                                                                                                                                                                                                                      13-MAY-1994;

A similar CC method can be used to detect Abs, in which case the ligand is an oligo-CC labelled Ag. The use of an amplifiable oligo as the label allows Ag or Ab CC can be covalently attached by the 5'- terminus to the N- or C-terminal of CC a synthetic peptide. In the example, peptide AAR62941 was coupled to CC oligo AAQ75024 using disuccinimidyl suberrate. Serum samples suspected to CC contain HEV Abs were immobilised on plastic tubes or wells, then CC usabhed for 30-60 mins with the peptide-oligo proruct. The vessels were CC washed; bound oligo was released with 0.2M glycine and amplified in a CC separate tube using as primers AAQ75025 and AAQ75026 in 30 Cycles of PCR. CC The amplification product - AAQ75031 - was treated with uracil DNA CC glycoslase to remove the U18 fragment, and the product captured by immobilised oligo-dT. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                         Anchored poly(T) oligonucleotides polyT-anchA (AAT94667), polyT-anchC (AAT94668) and polyT-anchG (AAT94669) are complementary to the upstream region of a polyadenylation sequence. They were used to prime cDNA synthesis from snapdragon (Antirrhinum majus) petal and leaf RNA, and were also utilised in the PCR amplification of plant cytochrome P450 sequences (see also AAT94670-73). A DNA clone (see AAT94657) encoding flavonoid 3' hydroxylase (see AAM95704) was isolated using a differential display approach. This can be used to manipulate the pigmentation of

                                                                                                                                                                                                                       gene. Also described is a gene comprising a cDNA sequence encoding maize belta 9 desaturase. (I) can be used to modulate expression of a gene, preferably Delta-9 desaturase or a granule bound starch synthase (GBSS) gene, in a plant (preferably a maize or canola plant). (I) can be used to modulate caffeine synthesis in a coffee plant, nicotine production in a tobacco plant, fruit ripening processes in an apple, tomato, pear, plum or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or marigold plant or lignin production in a tobacco, aspen, poplar or pine

Young SA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Delta-9 desaturase. (I) can be used to modulate expression of a gene, preferably Delta-9 desaturase or a granule bound starch synthase (GBSS) gene, in a plant (preferably a maize or canola plant). (I) can be used to modulate caffeine synthesis in a coffee plant, nicotine production in a tobacco plant, fruit ripening processes in an apple, tomato, pear, plum or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or marrigold plant or lignin production in a tobacco, aspen, poplar or pine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an enzymatic nucleic acid molecule (I) with RNA cleaving activity, which modulates the expression of a plant gene. Also described is a gene comprising a cDNA sequence encoding maize Delta-9 desaturase. (I) can be used to modulate expression of a gene, preferably Delta-9 desaturase or a granule bound starch synthase (GBSS)
                             Nuclease resistant antisense oligo
                                                                                       14-JUL-1998 (first entry)
                                                                                                                                            AAV21970

The methods are particularly used in immuno-compromised individuals (e.g. patients with acquired immunodeficiency syndrome or those receiving chemotherapy or radiation therapy), optionally in combination with, or fused to, antiviral or other antimicrobial oligonucleotides. Apart from therapeutic use, the oligonucleotides can be used to control bacteria in laboratory cultures, foods, beverages and industrial processes. The oligonucleotides are specific for bacteria, without affecting metabolism in mammalian cells. They may also activate RNase H and have a general, non-specific immune-stimulating effect. The oligonucleotides can be administered orally, intranasally, rectally, topically or by injection, optionally coupled to an agent (e.g. carbohydrate or polyamine) that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This antisense oligonucleotide is nuclease resistant and can be used in the treatment of animals, including humans, having a bacterial infection. The treatment comprises administration of such nuclease resistant oligonucleotides, targeted to a nucleic acid or protein of the bacterium, and formulated with a carrier. A compound comprising this nuclease resistant oligonucleotide can be covalently linked to an antibiotic. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A method has been developed for labelling an oligonucleotide having a repeated sequence of (XY)n (where X and Y consists of a combination of adenine and thymine or uracil or guanine and cytosine, and n is an integer of 1 or more) at the 3' terminal side in which the repeated sequence is added and extended using a labelled body of the nucleotide constituting the repeated sequence and a DNA polymerase lacked in 5' to 3' exonuclease activity. The method can be used for detecting a gene. The method can detect a gene in a sensitivity up to ten times higher than prior art methods. The present sequence represents a primer used in an example from the present invention
     A method has been developed for labelling an oligonucleotide having repeated sequence of (XY)n (where X and Y consists of a combination adenine and thymine or uracil or guanine and cytosine, and n is an integer of 1 or more ) at the 3'-terminal side in which the repeated sequence is added and extended using a labelled body of the nucleoti
                                                                                                                                                                        Example 1;
                                                                                                                                                                                                                                                                                     WPI; 1999-257710/22.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                 This sequence represents a primer of the invention. The invention relates to sequences of at least two nucleotides of formula: (X)m5'-(alpha)n-beta -N3'; or (X)m5'-(alpha)n-beta in composed of at least two nucleotides of formula: (X)m5'-(alpha)n-beta -N3'; or (X)m5'-(alpma)k-delta-N3'; where X = alabelled compound and/or a nucleotide with voluntary sequence; m = 0 or 1; alpha = thymine; n = natural number indicating the repetition of alpha; beta, delta = V or N; V = adenine, guanine or cytosine; N = adenine, guanine or thymine; N = adenine, guanine or thymine; N = natural number of 3 or over indicating the repetition of gamma, in which thymine expressed by gamma is composed of 1/3 or less of adenine, guanine and/or cytosine. The new nucleotides are useful as primers for RT-PCR and determination of base sequences. The new sequences allow for reproductive and highly efficient analysis of gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 constituting the repeated sequence and a DNA polymerase lacked in 3' exomuclease activity. The method can be used for detecting a ge method can detect a gene in a sensitivity up to ten times higher t prior art methods. The present sequence represents a primer used i example from the present invention

                                                                                                                                                                                 expression or to prevent DNA replication, or reverse transcription of RNA by retroviruses. The compositions are therefore particularly used to inhibit retroviruse; The compositions are therefore particularly used to inhibit retrovirus replication. The oligoarabinonucleotides can also be used, in combination with RNase H, as reagents for sequence-specific cleavage or RNA mapping, and additionally for the study and control of gene expression in cells. The oligoarabinonucleotides have excellent affinity for RNA, increased resistance to nucleases and show little if any non-specific binding to cellular or serum proteins. They target ss RNA, but not complementary ss DNA, so may be useful for targetting retroviral genomic RNA to inhibit the early stages of viral replication. Oligoarabinonucleotides containing pyrimidine bases form triple helices with significantly higher thermal stability than those produced by normal oligoarabinonucleotides containing beta-D-arabinose used in an
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a new composition for selective, sequence-
specific inhibition of gene transcription and expression in a host. The
composition comprises oligonucleorides containing arabinose sugars that
can hybridise to either a single-stranded (ss) RNA to induce RNase H
cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple
helix, thereby inhibiting DNA replication and/or transcription. The
oligoarabinonucleotides are used for antisense inhibition of gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Beta-D-arabinose; antisense; inhibition; transcription; expression; reverse transcription; viral replication; RNase H cleavage; triple helix formation; ss.

                                                                                                                                                                                                        composition comprises oligonucleotides containing arabinose sugars that CC can hybridise to either a a single-stranded (ss) RNA to induce RNase H CC cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple CC helix, thereby inhibiting DNA replication and/or transcription. The CC oligoarabinonucleotides are used for antisense inhibition of gene CC expression or to prevent DNA replication, or reverse transcription of RNA by retroviruses. The compositions are therefore particularly used to inhibit retroviruses replication. The oligoarabinonucleotides can also be CC used, in combination with RNase H, as reagents for sequence-specific CC cleavage or RNA apping, and additionally for the study and control of gene expression in cells. The oligoarabinonucleotides have excellent CC affinity for RNA, increased resistance to nucleases and show little if CC any non-specific binding to cellular or serum proteins. They target ss CC RNA, but not complementary ss DNA, so may be useful for targetting retroviral genomic RNA to inhibit the early stages of viral replication. CC Oligoarabinonucleotides containing pyrimidine bases form triple helices with significantly higher thermal stability than those produced by normal CC oligoarabinonucleotides containing beta-D-arabinose used in an CC exemplification of the present invention
